Doesn't come with online access code

By JL

I bought this book thinking it would come with the required online access code since I thought all new textbooks come with one, but when I opened it turns out it doesn't! So now I have to spend \$60 more for the online access code. So just beware when you're buying it.

Great bio textbook

By Danielle

As you might guess, I bought this for a college biology course. I think it is one of the better science textbooks I have come across so far; everything is explained in easy to understand language, there are tons of illustrations and diagrams, and the text even repeats some of the more complex information more than once in a chapter (in case you didn't understand it the first time). It is well organized. Rarely do I read the supplemental "fun fact" type stories in textbooks but the ones in here are very interesting and actually add to the rest of the material.

Kindle version available on PC

By Steven

Using a kindle for textbooks may seem like a weird choice, but I happened to get a great amount of use out of it. The kindle reader program is available on your home computer, so you're not stuck reading it on a tiny screen or anything. The ability to search the document for keywords, or quickly swap between chapters made my time using it a lot easier.

As for disadvantages, the price is one. Paying \$70+ on a digital file seems a little high, even if it is cheaper than most other versions of the book. Secondly, the kindle app is a little touchy when it comes to swapping pages. Often trying to read the text at the bottom of the page resulted in swapping to the next one on accident.
