PLASMA ANTENNAS (ARTECH HOUSE ANTENNAS AND PROPAGATION LIBRARY) BY THEODORE ANDERSON PDF

The plasma antenna is an emerging technology that partially or fully utilizes ionized gas as the conducting medium instead of metal to create an antenna. The key advantages of plasma antennas are that they are highly reconfigurable and can be turned on and off. The disadvantage is that the plasma antennas require energy to be ionized. This unique resource provides a solid understanding of the efficient design and prototype development of plasma antennas, helping engineers to meet the challenge of reducing the power required to ionize the gas at various plasma densities. Professionals also find thorough coverage of the technical underpinnings of plasma antennas, as well as important discussions on current markets and applications. Additionally, this book presents experimental work in this cutting-edge area and reveals the latest developments in the field. This in-depth reference is supported with over 70 illustrations and more than 110 equations.

" A Long Awaited Book"

By Lawrence S. Cohen

The book Plasma Antennas written by Dr. Ted Anderson, a renown expert in plasma physics, has written a remarkable book. The book gently introduces the reader to plasma antennas and the underlying physics behind their operation. The author is able to interweave conventional antenna theory, such as the factors inherent in impedance and thermal noise, into the specifics of plasma antenna operation. What is particularly unique to this book is the satisfying way in which the author introduces the relevant mathematics of plasma antennas so that the reader gains the analytical and computational skills necessary to specify and design plasma antennas. Unusual to this book is how the author discusses the construction of basic plasma antennas

so that the reader can obtain a practical sense of how they work. Plasma selective surfaces are introduced and how reconfigurable filtering of electromagnetic waves can be accomplished.

The book, Plasma Antennas, promises to provide the researcher, engineer, and manager new insight on an emerging technology that may provide the solution to many of the spectrum management, electromagnetic compatibility and antenna problems facing the wireless and radar communities.
