For the farmer, the seed is not merely the source of future plants and food; it is a vehicle through which culture and history can be preserved and spread to future generations. For centuries, farmers have evolved crops and produced an incredible diversity of plants that provide life-sustaining nutrition. In India alone, the ingenuity of farmers has produced over 200,000 varieties of rice, many of which now line store shelves around the world. This productive tradition, however, is under attack as globalized, corporate regimes increasingly exploit intellectual property laws to annex these sustaining seeds and remove them from the public sphere.

In *Stolen Harvest: The Hijacking of the Global Food Supply*, Shiva explores the devastating effects of commercial agriculture and genetic engineering on the food we eat, the farmers who grow it, and the soil that sustains it. This prescient critique and call to action covers some of the most pressing topics of this ongoing dialogue, from the destruction of local food cultures and the privatization of plant life, to unsustainable industrial fish farming and safety concerns about corporately engineered foods. The preeminent agricultural activist and scientist of a generation, Shiva implores the farmers and consumers of the world to make a united stand against the genetically modified crops and untenable farming practices that endanger the seeds and plants that give us life.

Informative and compelling

By Malvin

In this remarkable book, Vandana Shiva effectively contrasts corporate command-and-control methods of food production with the small farmer economy that predominates in the third world (especially in her native India). In contrast to what many here in the U.S. might perceive as the conventional wisdom, Shiva makes a strong argument that local, small scale agriculture is superior to the agribusiness model for a number of reasons.

First, Shiva points out that many of the productivity gains attributable to the Green Revolution were achieved by dramatically increased inputs of fertilizer, seed and water. When one compares units of input with units of output, however, native practices produce higher yields -- especially when one takes into account the multiple uses derived from a single product.

For example, mustard oil is a vital product used by many of India's poor for cooking, seasoning, medicine and other uses. But it has been banned by the Indian government (under highly suspicious circumstances) in order to allow imports of soybean oil products. While giant corporations benefit from expanded sales, native industries have been destroyed, contributing to poverty and malnourishment.

Shiva discusses the commercial fishing and aquaculture (shrimp farming) practices that inevitably result in environmental destruction and reduced catches. She compares this short-sighted approach with traditional Indian fishing techniques that have successfully sustained themselves for generations while protecting important ecosystems such as mangrove forests.

Shiva discusses corporate patenting of seeds, which insidiously transforms the cooperative ethic of seed sharing into a criminal offense. The author supports a non-cooperation movement in India that is resisting corporate attempts to claim ownership of seeds that have been cultivated by countless generations of farmers. Shiva's sacred cow / mad cow metaphor effectively and appropriately contrasts agribusiness with small farming. India's sacred cows live in harmony with the environment, performing multiple services and producing multiple products for the community; whereas mad cows are a grotesque manifestation of an industrial system obsessed with uniformity, technology and profit.

Shiva also touches on the topic of genetic engineering (GE) and discusses the threat it poses to biodiversity, food safety and human health.

The Afterword to the book alludes to the WTO protests in Seattle. Shiva believes this watershed event proves that people are becoming more aware of the dangers of unaccountable corporate power, yet she believes that positive change is possible. This opening of consciousness to new possibilities may be attributable to the extraordinary work of people like Vandana Shiva, whose intelligence and compassion is abundantly evident in this book. Highly recommended!

Critically important for environmentalists & students.

By Midwest Book Review

In *Stolen Harvest: The Hijacking Of The Global Food Supply*, renowned environmental activist Vandana Shiva charts the impacts of globalized, corporate agriculture on small farmers, the environment, and the quality of the food we eat. Shiva writes about genetically engineered seeds, patents on life, mad cows (and sacred cows), shrimp farming, and more. *Stolen Harvest* is a passionate, articulate, highly recommended "wake up" call to the public regarding the role of genetic engineering in commercial agriculture, the growing domination of agribusiness with respect to world food supplies, and the need for sound environmental thinking with respect to feeding the burgeoning populations of the world.

Brilliance

By Juliana Vander Voort

If you deplore the WTO and MN corporate control over the world's food supply through intellectual property rights and patents on genetically engineered seed - then reading *Stolen Harvest* is a must. Vandana Shiva brilliantly reveals the current crisis that Indian farmers are facing as Monsanto and other mega corps are jeopardizing the livelihoods of impoverished persons (worldwide) through seed monopoly and a centralized system of agriculture commerce. Shiva discusses the impact of industrial farming and aquaculture on the environment and how it stresses local populations and threatens the diversity of species. A MUST READ!
